International Ocean Discovery Program

Bibliography

containing citations related to the

International Ocean Discovery Program

Last updated: February 2023
Introduction

The International Ocean Discovery Program (IODP) Bibliography includes citations for Proceedings of the International Ocean Discovery Program volumes beginning with IODP Expedition 349 and published and “in press” citations derived from reference lists for these Proceedings volumes.

Citations for the IODP Proceedings volume reference lists are generated by chapter authors, who are responsible for providing complete reference information for every citation from their text and ensuring that all reference information is complete and current at the time of initial submission. The IODP bibliography editor is responsible for formatting citations for inclusion in IODP Proceedings volumes and reports, IODP expedition-related bibliographies, and the IODP Bibliography. As these citations are edited, document object identifier (DOI) numbers or URLs and hypertext links are added to any citation for which a DOI or URL is available, and contents of citations are confirmed via CrossRef or GeoRef (American Geological Institute citation database) when possible. All of the citations are housed in an IODP EndNote library from which reference lists may be exported upon request.

The bibliography editor makes periodic revisions to the IODP Bibliography to add citations, correct errors, add DOI numbers or URLs, and update in-press citations that have been published. The online IODP Bibliography PDF file is updated twice annually.

Please inform the bibliography editor (lowe@iodp.tamu.edu) if you notice an error in the IODP Bibliography.
