Several colour changes down core as shown. Relatively sharp around 110 cms.

White disting to core.

Rocks Caoareous Debris throughout core.

Burrows contain sediments of adjacent zone.

SY 5/2 (olive gray) is hemipelagic Caoareous Mud.

SY 6/2 (light olive gray) is mainly Caoareous ooze (shark slide at 122 cms).

Drilling disturbed in top 60 cms with sediments drawn down on right side of core.
