0-150 cm

Slight to moderate bioturbation and mottling throughout the section.

Sandy layers (slightly pyritic) occur at 43, 47, 65-69, 89, 108, and 129 cm.

Black pyrite streaks occur throughout the section.

The upper 44 cm is light olive gray in color. A very gradational contact
occurs at c. 44 cm. Between 44 and 150 cm the color is
gray (5Y 6/1).
