0-93 cm: Unlithified intraclastic floatstone
Clasts are foraminiferal chalk to lithified wackestone, one clast at 43 cm has slickensides, clast at 90 cm is partially lithified foraminiferal nanooocer
Clast size ranges from 0.1-6 cm
Clasts are crudely bedded
Some clast have iron oxide stain on surface
Clast at 43 cm is macroborer
93-142 cm: Lithified intraclastic foraminiferal packstone
95-142 cm: Unlithified to partially lithified intraclastic foraminiferal packstone
142-150 cm: Unlithified to partially lithified intraclastic foraminiferal nanooocer
& Microfossil
