This section consists of yellow brown (10YR 5/4) marl. Entire section is moderately bioturbated with subhorizontal burrows. Intervals from 0-17 cm and 130-150 cm are mottled with dark grey material. Intervals from 32-50 cm and from 76 to the sloping boundary at 102-106 cm are slightly paler. A slightly curved sloping boundary from 102-106 cm separates paler material with sand-sized forams above from darker material below.
