- light colored calcareous clay (wet), stained by darker burrows
- burrows probably polychaetes
- spots of forams common
- much darker brownish burrows also observed around 15-17 cm
- black tuffaceous spots in burrows at 7-8 cm
- drilling disturbances are weak
- almost whole core long core A (drilling lamination)

This data are to be processed into a computerized data base along with existing standardized data from other legs and will be accessible to the scientific community at large. RECORD ALL MEASUREMENTS CAREFULLY, COMPLETELY, AND LEGIBLY.
