dark gray claystone, massive, unbioturbated at top, grading downward into finely laminated, slightly lighter-colored mudstone between 40-62 cm.

Sharp contact with bluish olive calcareous (?) claystone (62-72 cm)

Bedding $\theta = 12-15^\circ$

Grading downward back into dark gray claystone

Sharp contact at 83 cm, 487 cm, defining another bluish olive calcareous (?) claystone layer, and another (sharp contact) at 132-140 cm below massive dark gray claystone

Disseminated concretionary pyrite scattered throughout with no apparent affinity for any particular lithology
