Again, 2 types of sediment:

A) Light olive gray, massive, calcareous clay with 1-2% forams, minor
gray Mn-staining (0-40 cm, 60-80 cm,
90-103 cm, 112-123 cm)

B) Light olive gray & light gray
calcareous clay with 2.5% gray
Mn-rich (?) burrows & encrusters;
forams still ~1%.
(40-60 cm, 80-90 cm, 103-112 cm,
123-150 cm)

*Very diffuse.*
