0-150

**CLAYSTONE**

- Light brown, mottled with scattered light blue patches
- Probably altered ash (14% weight)
- Slightly clayey, drily deformable
- Occurs in all intra-biased sediment
- Red-brown banding common from 68-150

*These data are to be processed into a computerized database along with existing standardized data from other legs and will be accessible to the scientific community at large. Record all measurements carefully, completely, and legibly.*
