Monotonous green claystone, not calc.,
with rare horizontal layers at 11,
31-34, 52-53 cm. down to 127 cm.
This layer is mostly Planolites.

Scaly cleavage is sporadically
induced by drilling.

Dark laminites, dip 15° at the top
of clay.

Amazing but understandable that
This core was 150 cm long,
at the beginning but becomes
now 152 cm long eventually.

These data are to be processed into a computerized data base along with existing standardized data from other legs and will be accessible to the scientific community at large. RECORD ALL MEASUREMENTS CAREFULLY, COMPLETELY, AND LEGIBLY.
