Homogeneous (but drilling disturbed)
medium greenish gray to light gray
claystone or mudstone
grading into lower part into greenish,
brownish disturbed claystone

At 110.40 a piece of mica
tatched, disturbed by drilling:
originally worked here? an presence due
to drilling disturbance?

This calcite could represent a "vein" like
those observed higher in the core
(see section 3)

Fragment of mica
tatched, disturbed by drilling
(Fragment of
calcite)
