**ODP Visual Core Description**

**Sediments / Sedimentary Rocks**

**Section Description**

- **Foram-nannooze**
  - Fairly homogeneous white (10YR 7/1).

- **This and all "dark" layers** through entire core show gradational boundaries at 39-40, 10YR 7/1 (light gray).

- Could be disturbed 80-130 cm.

- Darker matted (or disturbed) interval 111-128 10YR 7/1 (light gray).

- *Darker color intervals attributed to presence of foram interra w/ dark mineral overgrowths - seem to be on both outside & inside of some specimens.*
