Intercalated turbidites and (pelagic)
foam-bearing nanno oozes.

1) Turbidites: nanno-foam oozes,
white to very pale brown,
having upward. Thin turbidites
in top 12 cm show eroded, scanned
basal, but possibly mild core
disturbance, too.

2) Foam-bearing nanno oozes (pelagic)
light gray to light greenish
grey, disturbed.

Flow in - 105 cm - 150 cm
obvious flow-in ("vertical bedding"
of coarse nanno oozes in base of core.)
