Grey structures @ 30° tilt seem to be associated with incipient microfaulting; most line fracturing of the chalk has parallel.

? Rotation between drill block-shave?

Vague layer or grey; with highly squashed burrows:
- Fractured core:
  - Squashed burrow.

In general, white clayey chalk, with few mammos visible in smear slides.

Vague grey layers

Drowned out grey wisps

Oozing soupy chalk & chalk fragments

This chalk has been highly compacted and fractured.
