Ash w/ lapilli
0-150 cm

Biscuit, dusky green (5G 3/2) accretionary volcanic ash, containing lapilli of a greenish gray (5G 5/1) color. Occasional basalt pebbles occur throughout the section, are well rounded, and on mm scale.

- Lapilli occur in beds, cross beds and as sporadic inclusions in the groundmass.
- Mineral-filled veins from 70-80 cm.
- Very fine scale (mm) laminations w/o lapilli in some biscuit, especially 91-98 cm.
