Foram calcareous chalk w/ nannos

0 - 150 cm

Greenish gray (5G 5/1)

Drilling breccia, shell fragments (Inoceramus) are common in:
1-5, 10-12, 45-50, 90-130 cm.

From 120-135 cm ash content increases and color changes to dark greenish gray (5G 4/1).

Ash flecks (<1mm) speckle the entire section.
