large wood fragments

Olive s sandstone - No carbonates - homogeneous to weakly laminated

centimetre downwind bioturbation (middle of core)

gradational strongly bioturbated contact

massive sandstone with carbonate cement - No visible structure

Clayey sandstone with abundant shells (Oysters dominant)

shaly erosional contact w/new worked clasts of

Black (2.5Y 2/1) finely (parallel) laminated silty claystone with interbedded 5 cm thick layers of clayey siltstone slightly bioturbated

light clayey siltstone
