**ODP VISUAL CORE DESCRIPTION**

**SEDIMENTS / SEDIMENTARY ROCKS**

**SECTION DESCRIPTION**

- 5 "pity" mm. intercalation

- 10 - 20 ft. of dark gray clay, intercalated with pale gray clay and silt;
  pervasive dark mottles

- 40 - light gray fine-grained sand

- 44.5 ft. light gray fine-grained sand (diagen)

- 54.5 ft. clayey silt

- 77 ft. - 83 ft. dark grey clayish silt

- 103 ft. causes "pity" intercalation (same probably diagenetic cement origin) as above

- 143 ft. greenish grey clayish silt (may be the very top)
