Calceols between sediment pieces are smeared with sediment.

The green, grayish, fine-grained to medium-grained sandstone is poorly sorted and heterogeneous.

A general bioclastic framework is common (up to 3%) and

silted (Il bedding)

Fine-grained sheet: green grains, 

glauconite 

quartzite

Several dm are distinctly graded.

39-42 cm slightly cross-bedded gravel

Conversion at around 40-50 cm might be small-scale angular upturned layers.
