0-133 cm. CLAY with interbeds of CLAYEY SILT to SILTY CLAY

CLAY occurs in thin to thick beds with thick color lamination and common horizontal simple burrows. Dark greenish gray (10Y 4/1).

Coarser interbeds are 1-4 cm thick, with sharp bases, grading from CLAYEY SILT to SILTY CLAY; commonly w/ planar lamination and abundant black plant fragments. Fine-grained turbidite deposits.

These beds are softer than more cohesive clay, tend to wash out.

133-136 cm. CALCAREOUS CLAY

Light greenish gray (10Y 6/1) beds w/ sharp base and gradational top, e-t by a few very small (1-2 mm) simple burrows.

136-150 cm. CLAY

Dark greenish gray w/ common burrows.

Thin graded CLAYEY SILT at 137-139 cm, and 139-138 cm.
